CASE STUDY: Boyd Anderson High School, Ft. Lauderdale, FL

Before treatment

After MicroGuard[®] treatment

Surface: Tile floor & grout in food service area of school.

System: One coat of MicroGuard AD702 Clear Sealer followed by one coat of MicroGuard AD708 Clear Tile Treatment.

Objective: To seal grout from food and beverage stains and render the surface area easier to clean and maintain.

Note: Bathroom floor areas were previously coated and based on the proven performance results of ease of cleaning maintenance in these areas, the school desired the same level of protection for the food service area. From these successes, the Florida Installer was granted a contract to coat an additional 10,000 square feet of floor surface area in this school system.

Still another example of success leading to additional success! The MicroGuard Tile Floor System continues to earn contracts within school environments, due to its robust performance, ease of cleaning maintenance and stunning beauty!
